Installation Guide and License Conditions
Korg opsix Habitat Sound Pack

Before transferring sound sets to your synth, please backup your patches first!

All Sound Banks are in the corresponding editor's format (if available). Please refer on the manual provided by the product's manufacturer. Whenever applicable, you can alternatively use the included SysEx-File.

To load the opsix Sound Pack into your unit:

1. Make sure you're using the latest OS and librarian software. You can find them here: https://www.korg.com/us/support/download/product/0/874/#software
2. Switch on the synth and wait until it's ready
3. Open opsix sound librarian software
4. The librarian will ask if you want to import your current opsix library. Confirm and make sure you'll back up your work by saving your library to a computer. "File" -> „save library"
5. Now, click on "File" -> „open library" -> select "load library"

6. Navigate to and select your library file from the downloaded folder „Limbic_Bits_Habitat_SoundPack_opsix". Depending on where you want the pack to be installed you can choose between two files: One will place the patches starting from position 1-75 overwriting the factory patches, the other will transfer the patches to the empty positions 400 to 474. The latter includes the factory patches. In any case, you can also manually move the patches to any position by drag and drop. Alternatively, you can also choose single patches from the equally named folder by clicking „load program".
7. Once you have placed the sound bank and patches, transfer them to your opsix unit by clicking „send all".
8. Done!
