JU-06A ISLANDS

Installation guide: Roland JU-06A ISLANDS Sound Pack

Before transferring sound sets to your synth, please backup your patches first!

In order to transfer the Roland JU-06A presets you'll only need to copy the sysex-files to the internal drive of your JU-06A.

1. Connect the JU-06A to a Mac or PC via USB and start the unit in "drive mode" by pressing and holding the bank button (2). It will take about 20-30 seconds to boot.
2. Open the JU-06A drive on your computer and make sure to backup your existing library first as the next step will erase your patches.
3. Inside the downloaded sound pack folder, you'll find a folder named „backup". Copy the patches included in the JU-06A backup folder into the "RESTORE" folder located in the "JU-06A" drive. If the „RESTORE" folder doesn't appear in the JU-06A drive, you have to manually create one.
4. After copying is completed, eject the USB drive and then press the ARPEGGIO [ON/OFF] button. Once the LEDs have completely stopped blinking, turn off the power

5. Reboot your unit and make sure the switch on the JU-06a is in the JU-06a position as the patches are made for the Juno 60 emulation.

6. Make some great music.

Trouble Shooting

In case something went wrong, please try these things:

1. Use a direct USB connection instead of a USB HUB
2. Try a different USB cable
3. Make sure you have the latest JU-06A firmware version
4. If you don't see a „Restore"-Folder, just create a new one.
